Engineering Interactive Ubiquitous Computing Systems

Albrecht Schmidt
University of Stuttgart

University of Stuttgart Germany

Overview

- Why to look beyond desktop and mobile user interfaces?
- Embedded computers are everywhere
- Ubiquitous Computing is becoming reality
- Cars are Ubicomp environments – a case study
- Defining trends for the future
- A vision for computing in the future - unlimited perception
- Lessons learned

15 June 2011 Institute for Visualization and Interactive Systems Albrecht Schmidt 3

“I would imagine that by now developers specify user interfaces on an abstract level...”

“software developers have moved from machine language and assembly to high level languages, toolkits, and frameworks – why are UI developers still talking about pixel spacing?”

“the ubiquitous pinch gesture on touch screens is the proof that content transformation has failed...”

15 June 2011 Institute for Visualization and Interactive Systems Albrecht Schmidt 4

University of Stuttgart Germany

Issues with HCI as a Scientific Discipline

Problems the discipline is concerned with are **understandable by anybody**

Solutions to the problem appears **obvious once found** (at least in an optimal case)

Once a solution is there it is not recognized that there was a problem

process from **problem to solution** is non-trivial...

15 June 2011 Institute for Visualization and Interactive Systems Albrecht Schmidt 5

University of Stuttgart Germany

The quality* of desktop user interfaces in 2011 is way better than the desktop UIs in 1991

*and quality has many aspects including usability, learnability, and efficiency

Computing is everywhere

Many devices to come!

Everything that is valuable may include mobile communication and tracking.

Who will create the basic hardware platform?
How will the meta service platform look like?

Some Building blocks for Ubicomp

- When will a OEM-device that includes...
 - GPS
 - Acceleration sensors
 - 3G data connectivity
 - Battery
 - ... connectivity for I/O

...be less than 10€|3€ (in large quantities) and less than 50g|20g?
(and perhaps we can do power harvesting, too)

Engineering Novel User Interfaces

A Case Study: *Gazemarks*

- An idea to start with...
- Ethnographic observation
- Formative study
- Systematic design of the user interface
- Implementation of a working prototype
- Rigorous evaluation and analysis
- Provision of guidelines, components, toolkits

15 June 2011 Institute for Visualization and Interactive Systems
Albrecht Schmidt 22

University of Stuttgart
Germany

<http://www.vis.uni-stuttgart.de>

Gazemarks

Motivation

- Reading while you drive?
- Looking for your way while driving?

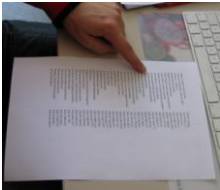

15 June 2011 Institute for Visualization and Interactive Systems
Albrecht Schmidt 23

University of Stuttgart
Germany

<http://www.vis.uni-stuttgart.de>

Gazemarks

Ethnographic Observation and Formative Study

- Study task: compare two telephone lists (40 names, one list on paper and one on the screen)
- 30 participants (volunteers; 10 female, 20 male; aged 23 to 61)
- Participants were not aware of the research question
- No time limit was enforced and time was not measured

- 22 out of 30 used fingers and/or objects to remember their last position on paper list
- 8 out of 30 used fingers, objects, or cursor on the digital list

People use fingers and objects as markers in tasks that require attention switching.

15 June 2011 Institute for Visualization and Interactive Systems
Albrecht Schmidt 24

University of Stuttgart
Germany

Gazemarks

Create this functionality in the digital world

- Idea: provide a visual feedback on digital documents to ease attention switching
- Technology: eye gaze tracking

- Example Domains:
 - Multi-screen setups with simultaneous visibility of documents
 - In-car information and entertainment systems that are used while driving
 - Switching between multiple documents of which only one is visible at the time (e.g. tabs in a browser)
 - Information terminal in an operating theater, which is used while working on the patient

Approach: detect last gaze position before the attention switch and highlight this area till the gaze returns

15 June 2011 Institute for Visualization and Interactive Systems
Albrecht Schmidt 25

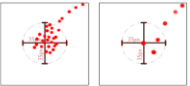

University of Stuttgart
Germany

Gazemarks

Basic parameters

Approach: detect last gaze position before the attention switch and highlight this area till the gaze returns

- What is a gaze fixation?
- How long is the last conscious gaze fixation?
- How can we detect a fixation in the gaze data?
- How can showing a visual placeholder be avoided after a blink?

15 June 2011 Institute for Visualization and Interactive Systems
Albrecht Schmidt 26

University of Stuttgart
Germany

Gazemarks

Visual Representations

- Focus group with 6 people to choose the visual representation
 - Flag
 - Spotlight
 - Focus area
- Questionnaire to express a preference
- Spotlight before Focus area and Flag
- Spotlight
 - Easy to find
 - Perceived a precise
 - Not hiding any information

15 June 2011 Institute for Visualization and Interactive Systems
Albrecht Schmidt 27

University of Stuttgart
Germany

Gazemarks

Implementation

- Hardware
 - Commercial eye tracker
 - Tobii X120 (with a data rate of 120Hz),
 - PC with a 42" display and an 8" display
 - Networked over LAN
- Software/Middleware
 - EI-Toolkit (component based architecture)
 - Proxy for the Tobii eye-tracker
 - Message exchange via UDP
- Test Application
 - Java application implemented for the experiment

15 June 2011 Institute for Visualization and Interactive Systems
Albrecht Schmidt 28

University of Stuttgart
Germany

Gazemarks

Experiment

- Setup
 - 2 screen setup
 - Map search task on small screen (6 letters with 8 numbers each)
 - IQ questions on large screen
- Design
 - Within-group, each subject complete both task in counterbalanced order
 - Procedure: Find given letter, attention switch, find given letter again
 - Independent variable: visualization (Spotlight vs. no visual aid)
 - Dependent variable: search time (limit 3000 ms)
- Participants
 - 16 volunteers (23 to 52 years old)

15 June 2011 Institute for Visualization and Interactive Systems
Albrecht Schmidt 29

University of Stuttgart
Germany

Gazemarks

Results

- Participants were considerably faster in searching with *Gazemarks*
 - with *Gazemarks*: 625.75 ms (median)
 - without *Gazemarks*: 1999.50 ms (median)
- Comparing search times
 - non-parametric Wilcoxon signed-rank test
 - $p < 0.001$
- Qualitative results
 - Preferences for *Gazemark*
 - Mean value 4.26, standard deviation 0.53, on a scale from 0 (completely senseless) to 5 (very sensible)
 - Reported benefits as perceived by the user: enabling rapid task switch and less attention required

Engineering Interactive Systems

- A new communication media
- Besides Interaction – understand:
 - all stakeholders
 - business case

15 June 2011 Institute for Visualization and Interactive Systems
Albrecht Schmidt pd-net.org 32

Engineering Interactive Systems is about the (measurable) values you create

University of Stuttgart
Germany

http://www.viis.uni-stuttgart.de

Systems are part of people's lives

Measurability!

- Increasing the **efficiency** of work processes
- Minimizing **human errors** in interaction with systems
- Increasing the efficiency of **education and training**
- **Reducing the cognitive load** (or stress level) for a task
- ...
- Making interaction more **enjoyable**
- ...
- Improving **safety** when using systems
- Creating systems that are "**natural**" and "**intuitive**" to use

<http://www.vis.uni-stuttgart.de>

Lessons learned: **implement it and try it out!**

Novel Interaction Techniques on PDAs

Context-aware Phone my initial experience (1998)

Institute for Visualization and Interactive Systems
Albrecht Schmidt

University of Stuttgart
Germany

Lessons learned: **Be happy if 20% like it**
Context-Call and Context Phonebook (2000/2001)

Institute for Visualization and Interactive Systems
Albrecht Schmidt

15 June 2011

University of Stuttgart
Germany

Lessons learned:
Humans are "adaptive systems" hence creating adaptive system is tough...

Institute for Visualization and Interactive Systems
Albrecht Schmidt

15 June 2011

University of Stuttgart
Germany

Lessons learned:
Design and develop for the creative user

Institute for Visualization and Interactive Systems
Albrecht Schmidt

15 June 2011

University of Stuttgart
Germany

How to do research on novel ubiquitous user interfaces?

- Create a new experience and a new value
 - Explore something that has become possible that was not possible before
- Make use of the many people out there (twitter, facebook, Mechanical Turk, etc.)
 - creating requirements, explore designs, evaluation, ...
- Make the full use of (novel) modality
 - Technology will not be the limiting factor (e.g. Kinect)
- Understand and Combine implicit and explicit interaction
- Find something REAL you can measure
 - measurability is key otherwise your will design "something"

Institute for Visualization and Interactive Systems
Albrecht Schmidt

15 June 2011

University of Stuttgart
Germany

**Questions?
Comments?**

Novelty may be about the values/ethics

Lessons learned:
Implement it and try it out!
20% who like the UI are a large market
Humans are smart and adaptive
Design for creative users
